

SECANT ARCHITECTS LLP

Architecture · Interior Design · Sustainable Development

Bangalore, India | secant.in

"Designing spaces that inspire, endure, and evolve."

Company Overview

Secant Architects LLP is a premier architecture and design practice headquartered in Bangalore, India. Founded in 1999, the firm has spent two decades shaping the built environment across South Asia — delivering projects that balance aesthetic ambition with functional rigour and environmental responsibility.

With a multidisciplinary team of licensed architects, urban designers, interior specialists, and sustainability consultants, Secant brings an integrated perspective to every commission — from intimate luxury residences to large-scale, mixed-use urban developments.

25+ Years of Practice	3 Designated Partners	3 Core Typologies	100% Client-Centric Delivery
---------------------------------	---------------------------------	-----------------------------	--

Mission & Core Values

Our mission is to redefine architecture through designs that are beautiful, efficient, and future-ready. Every project begins with a deep understanding of the client's vision, the site's context, and the community it will serve.

- Creative & Future-Forward Design — spaces that redefine urban living and set new benchmarks.
- Sustainability at the Core — energy-efficient, eco-responsible solutions embedded from concept stage.
- Client-Centric Approach — tailored architectural responses to every unique brief.
- On-Time, On-Budget Delivery — transparent project management with no surprises.
- Collaborative Excellence — architects, engineers, and designers working as one integrated team.

Services Portfolio

Secant provides end-to-end architectural solutions across the following disciplines:

Residential Design

From curated apartments and urban villas to sprawling bungalows, our residential portfolio reflects a mastery of space planning, material selection, and lifestyle integration. Each home is a personalised narrative of its inhabitants.

Commercial Architecture

Secant designs corporate offices, retail environments, and commercial hubs that maximise operational efficiency while projecting a compelling brand identity. Our commercial spaces are built for productivity, adaptability, and long-term value.

Mixed-Use Developments

We specialise in the intricate design challenges of mixed-use developments — projects that seamlessly weave together residential living, retail, hospitality, and commercial activity within a single, cohesive urban fabric. Our integrated approach ensures that live-work-play environments function as vibrant, self-sustaining communities rather than isolated silos.

Interior Design

Our interiors practice encompasses both luxury and functional design across residential and commercial sectors. We believe great interiors are an extension of great architecture — consistent in language, purposeful in detail.

Sustainable & Smart Architecture

Sustainability is not an add-on at Secant — it is foundational to our design process. We integrate passive design strategies, renewable energy systems, green material specifications, and smart-building technologies to deliver structures that minimise environmental impact and reduce lifecycle costs. Our projects are designed to meet or exceed international green building standards, positioning them for LEED, IGBC, and GRIHA certification pathways.

Sustainability Commitment

Our Green Design Philosophy

Secant approaches sustainability as a design imperative, not a compliance checklist. We embed environmental thinking at every stage — from site analysis and orientation to material lifecycle and post-occupancy performance monitoring.

Our sustainable design practice encompasses:

- Passive solar design, natural ventilation, and daylighting strategies to reduce mechanical load.

- Green roofs, rainwater harvesting systems, and greywater recycling integrated into building fabric.
- Specification of low-embodied-carbon and locally sourced materials.
- Smart building management systems for real-time energy and water monitoring.
- Biodiversity-positive landscaping and urban greening within mixed-use master plans.
- Alignment with LEED, IGBC Green Homes, and GRIHA rating frameworks.

Mixed-Use Development Expertise

Mixed-use development represents one of the most complex and rewarding typologies in contemporary architecture. Secant has cultivated deep expertise in designing integrated urban environments that respond to the dynamic demands of modern city life.

Our mixed-use commissions are characterised by:

- Master planning that prioritises pedestrian connectivity and public realm quality.
- Vertical integration of uses — ground-floor retail, mid-level offices, upper-level residences.
- Shared infrastructure and services designed for long-term operational efficiency.
- Contextual sensitivity to neighbourhood character and local urban fabric.
- Phased delivery strategies that allow projects to generate value from early stages.

Selected Project Highlights

The following projects exemplify our capabilities across mixed-use and sustainable design:

Urban Confluence — Integrated Mixed-Use Hub

Mixed-Use Development | Bangalore, India

A landmark urban regeneration project combining Grade-A office space, curated retail, serviced residences, and a public plaza. The design prioritises active street frontages and a green central spine, achieving a LEED Gold-equivalent performance benchmark.

The Canopy Residences

Sustainable Residential | Bangalore, India

A premium residential development of 120 apartments designed around a biophilic framework. Features passive cooling through double-skin facades, rooftop solar PV, and a net-zero water strategy achieved through rainwater harvesting and greywater recycling.

Corporate Nexus Campus

Commercial Architecture | South India

A corporate campus for a multinational client integrating flexible office floors with wellness amenities, landscaped courtyards, and smart-building controls. Designed for LEED certification with a 40% reduction in predicted energy use intensity over baseline.

Villas at the Grove

Luxury Residential | Karnataka

A collection of 18 bespoke villas drawing on vernacular architectural language reinterpreted through a contemporary lens. Each villa responds individually to its plot's topography, maximising views, natural light, and cross-ventilation.

Our Design Process

Every successful project at Secant follows a structured yet flexible process:

- Consultation & Ideation — deep-dive briefing to understand vision, programme, site, and aspirations.
- Concept Design — spatial strategies, precedent studies, massing explorations, and sustainability targets.
- Design Development — architectural blueprints, 3D visualisations, material palettes, and specifications.
- Technical Documentation — detailed drawings, engineering coordination, and regulatory submissions.
- Construction Administration — on-site supervision, quality assurance, and contractor management.
- Handover & Post-Occupancy — commissioning support, client training, and performance monitoring.

Why Partner with Secant

A collaboration with Secant Architects LLP brings together two decades of South Asian design experience, a rigorous sustainability ethos, and a proven record in complex mixed-use typologies — offering international partners a deeply capable, locally embedded design team ready to operate at a global standard.

- Established 2005 — 20 years of continuous practice and project delivery.
- Headquartered in Bangalore — the innovation capital of India, with access to a rapidly growing market.
- Full-service capability — architecture, interiors, sustainability, and master planning under one roof.
- International design sensibility combined with deep understanding of South Asian context and regulation.
- Track record across residential, commercial, and mixed-use sectors with diverse client profiles.
- Commitment to award-winning design quality and on-time, on-budget project completion.

Contact & Collaboration Enquiries

We welcome enquiries from international firms and developers interested in collaboration, joint ventures, and design partnerships.
